Web Design - Capstone Project

## Resume Website - StevenJacobsen.com

For my capstone project I decided to create a website which displays my resume and projects I'm working on. The goal of this website is to be responsive, accessible, easy on the eyes, and hopefully land me a job!

### W3 validation:

Showing results for <https://stevenjacobsen.com/>

Checker Input

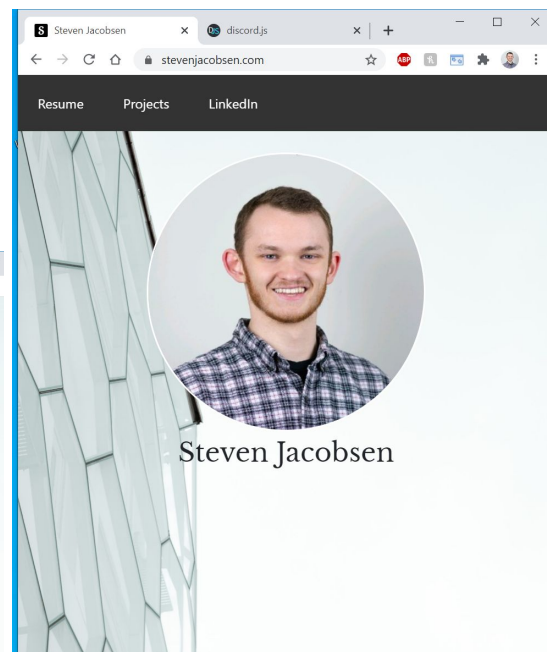

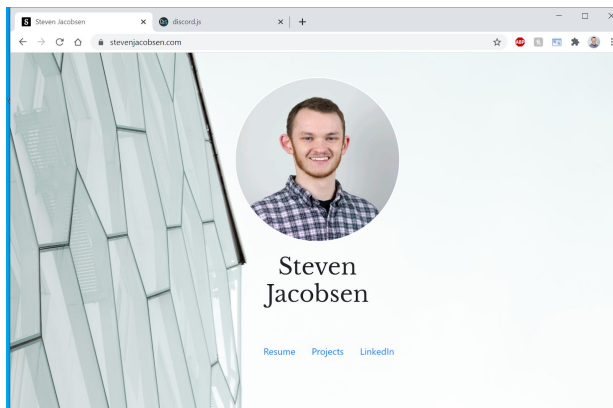

Show ☐ source ☐ outline ☐ image report

Check by

Document checking completed. No errors or warnings to show.

### Responsive Design:

The site is very responsive. I've attached a mobile and desktop view of the homepage for reference, but feel free to open up my site ([stevenjacobsen.com](https://stevenjacobsen.com)) on your phone or mobile device to find out!

**Well-styled:**

The CSS for my homepage: <https://paste.ofcode.org/ytswjajzT32Nb2yh2WmBAg>

The CSS for my other pages: <https://paste.ofcode.org/EuEzy7w9X8cJpwKdwfhE4g>

**Extra Credit:**

For my 4 extra's:

- 1.) Registered a domain, bought hosting, installed a SSL certificate, and wrote my code to be Search Engine Optimized.
- 2.) The sticky footer on my homepage.
- 3.) The transforming navbar on my homepage.
- 4.) The Javascript application "locallandscapes on my projects page (<https://stevenjacobsen.com/projects/landscapes/index.html>). Warning: This application does not work if you don't give it access to your location.
